### ***ABSTRACT***

*This Fix-It-All System is purposely to assist the community in the personal services. With the existence of this system, they will find it much easier where the system can run immediately to provide the services based on their location. This system will display the best suggestions for their preferred services. They also can see the ratings from the services provider so that other users can see. The users need to log in to leave a feedback. This system specifically for this time being, is focused on the UiTM staffs and students are basically looking for immediate services that will assist them with the skilled workers who will repair and maintain vehicle engines, also other services such as car wash, or to purchase any vehicle accessories that the users are going to seek for in a meantime. However they have no idea where to locate the services. For instance, whenever a person has a car breakdown, they start to panic and sometimes people who are passing around the place come to lend their hand. If the day is unfortunate, it can be crime cases. On the other ways, they also will start to seek for the nearest services and this will consume time to search it by each places.. The advantages of this sytem will ensure that the skills of the skilled people who works under certain bodies/workshops will be employed beneficially. In addition, the workshops will tend to involve their business in the system to provide their services to community for a bigger market potential. The assistance will be known globally from all places.*
