ABSTRACT

Modern living life-style has become one of the main concerns for the urban communities. Nowadays, people love to buy a goods or things especially for celebrating Eid or anything else that make the space are not enough for the new goods. Therefore, the ExtraStorage System was developed in order to help people or user to keep their things at the outside storage. These systems tend to help user in term of storing also monitoring the security of their things just by one click. Basically, people have many problems in order to store their things at the right place and need to monitor it every day. In the technology that increasingly sophisticated, it also helps to know the important of managing the system directly even though we are at anywhere and anytime. Besides that, the knowledge about the extra storage also will be aware by any related issues that are happen nowadays. The objective of the system is to create and provide a systematic management of storage spaces.
