### ABSTRACT

*Problem-solving is one of the most important issues faced by communities. Regardless of the nature of the problems such as general, health, community, technical, and so on. Now days, the internet has become one of the most important sources of a solution for the problems that existed. Portal such as Stack Overflow, Quora, Lowyat.net, and others already been created for users to ask anything regarding to their problems and find the solutions to solve it. However, the portal that were existed mostly only focusing and discussing about the technology or programming. So, it's only will be the best choice for those who seeks the information or solution about the technology or something that related to it. Another problem that faced by users is the portal consists of a limited amount of space for commenting. Users need to be more specific when asking the question, and that will lead to misunderstanding the problems. Therefore, the new system with new features will be create named as SimplyAsk. The objectives of creating this system is to enable the community to ask anything no matter whether their question related to the technology or not with unlimited spaces for commenting. Besides that, uniqueness of this system is there will be specialist in every field and general users like others who will be available for helping the users to find the solution. But, for having a Q&A with specialist privately, the users need to pay first then get to comment until find the solution. For the commercialization, beside been use generally, this system also can be use by the organization as a medium for communication or sharing knowledge whether internal or external.*
