ABSTRACT

As students, they need to attend many events at university. However, there is no mechanism of platform to record what they have done throughout their study. Therefore, Student Plus is system that allow students to upload their work and project as references such as participation certificate, cocurricular activity certificate, working progress, project report and etc. Furthermore, problem that often occur among students, they do not have the main platform for storing and uploading the projects they run. The information that student has stored or contributed does not have uniform and complete documentation leaving the information blur and wasted. Other than that, this system is to help students to develop a complete, authentic and orderly course work portfolio, to provide portfolio automation systems encompassing web-portfolio for students and to facilitate prospective employers to review student work and profile for use in industrial works and training. Moreover, uniqueness of this system, it allows a company review portfolio fresh graduate such as E-Resume + CV online. This system also can be used by UiTM students to upload information that is certified by UiTM's academic administration to ensure the information submitted is accurate and authentic. The usefulness of this system for students as it can provide a platform for them to have a systematic and organized portfolio. This will enable them to provide authentic information for the use of industry or career fields. In term of commercialization, this system will be used by undergraduate and postgraduate students.

Keywords: student portfolio, talent management, online portfolio
