**ABSTRACT**

*Night markets in Malaysia are definitely popular destinations among locals and tourist where it could be found easily in almost every small town and city in every state. Moreover, night market one of the tourist attraction in Malaysia. Night market is a street market which operates at night and commonly dedicated to more leisurely strolling, shopping and eating than more business-like day market. However, findings information related to the night market is difficult due to a lack of systematic information system. E-Pasar Malam system is designed to help the visitors who came from outside of the state to track the location of the night market that exist in Malaysia. Usually, the visitors will face the problems in finding the location of the night market. So, it will not satisfied the visitors if they cannot find the right place. The objective of E-Pasar Malam system is to help the visitors search and find specific stalls location at the right time and at the right place. The system will provide details information about the locations, the specific seller location and the day/time of every night market business hour. In addition, the users of the system are visitors and sellers. Hence, the E-Night Market system can be commercialized to a government agencies and local authorities who looking for the places of the night market in Malaysia.*
